It will feel as if you were running Windows at all its effects You can fine-tune how you want to distribute your machine's resources while running Parallels, so that you can give more or less to one or the other depending on your needs.. Another option is to have Windows in integration mode, that means that you won't see Windows as a separate application running on your mac but integrated on it so that you can run Windows applications from your mac directly while running Parallels like this.. Alternatively, if you just want to test something without putting your Mac at risk, create an isolated throwaway virtual machine, test your new fancy SW, and if anything happens (or you just don't like it anymore), discard the virtual machine.
